## Grains, Grasses, Legumes -- August, 1955

GRAINS -- Yields, test weights and quality of seed wheat is excellent this year. Certified seed of the six leading varieties is quoted and is or soon will be ready for shipment or pick up. Prices have been kept at low levels so that cleaned, tested, treated, ready-to-sow seed is but a few cents more per bushel than a farmer's own grain would be when cleaning, hauling, treating and similar costs are considered.

Rye listings include Balbo, locally produced T.P. from Tetra Petkus seed and the approved Tetra Petkus. Barley includes the three best varieties, all of which are certified, treated, tops in quality and widely recommended where fall barley can be used.

Dubois winter oats is considered the most winter hardy and one of the highest producing varieties. Early seeding and mild winter weather conditions are essential to satisfactory production.

### GRASSES - LEGUMES

GRASSES -- Prices on most of the widely used kinds are expected to be lower during the coming season than they were last year. These include timothy, orchard grass, the fescues, bluegrass and a few others. Bromegrass is expected to be slightly higher due to a smaller western crop of the southern type of brome.

While markets have not been fully established, it appears that both fall and spring prices on grasses will be favorable to the buyer.

LEGUMES -- Prospects for both alfalfas and clovers are good. Again, as with grasses, prices will suit the buyer better than they do the producer. Especially should the certified, higher producing varieties of legumes be more in line during the coming season.

Whether it is grains, grasses or legumes, yields as well as satisfaction are greater where the best seeds are used. Seed costs are such a small part of the expense of producing a crop. Start with good seed. Try SCOTTS.

Sincerely,

SCOTT FARM SEED COMPANY.
